ABSTRACT

PROBLEM TO BE SOLVED: To present necessary documents to a customer without omission when the customer purchases a vehicle.

SOLUTION: Vehicle purchase contract information, such as the name of the customer, the model of the purchased vehicle, the existence/nonexistence of a trade-in car, the form of payment (cash/credit) and the existence/nonexistence of a tax reduction target is stored in a contract information database 40. A processor 10 extracts information about the names and the number of the necessary documents from a document database 20 on the basis of the contract information stored in the contract information database 40 and displays the names and the number of the necessary documents on a display 50.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a means which generates attached declaration formed in the order needed for declaration calculation so that even a person who does not have enough taxation knowledge and experience

can speedily and accurately generate a declaration **form** for a system which generates the application **form** needed for the declaration of a cooperation **tax** and a local **tax** and its attached **forms** as attached documents.

SOLUTION: The cooperation **tax** and local **tax** declaration **form** generation system 1 comprises a client terminal 30 at a business **tax** practitioner and an accountant's office and a data center 10 of an operating trader which provides rental services of various operation software requested through an Internet line 20, and the data center 10 is equipped with a cooperation/local **tax** declaration **form** generation **database** 14a consisting of a declaration **form** input screen table 14a-1 for cooperation and local **taxes** , a table 14a-2 for input process order setting, a municipalities information table 14a-3, a table 14a-4 for declaration **form** generation and storage, a member user **database** 14x, a **database** 14y for input process result storage, and a use history **database** 14z and an application server 12 is equipped with cooperation/local **tax** declaration **form** generating software 12a and various operation software 12x.

ABSTRACT

PROBLEM TO BE SOLVED: To solve the problem that a global economy is prevented from development by an authoritative procedure such as making trade document and seal and signature by an executive, and that a public document issued from an autonomy and a certificate, etc., can not be received unless we go to a counter in a specified hour.

SOLUTION: Declaration about **tax** , registration of various types of public documents, storage and documentation of papers for business, and inspection of these documents can be realized from a terminal after a specified certification by a site called a digital post. Vast amount of documents are searched easily because they are stored in XML description. Besides, a new document can be carried out at once because finite **form** of the documents is formatted and stored. Digital signature and digital signet are stored in a high priority **database** , and then putting seal on the document and issuance and distribution of the certificate can be realized.

INTL CLASS: G06F-017/60

ABSTRACT

PROBLEM TO BE SOLVED: To prevent occurrence of a trouble such as a failure of point addition and to reduce a paperwork amount in system operation.

SOLUTION: In application of a contract promoted by an introducer, attribute data of the introducer are extracted from an introducer **database**, and data for preparing a contract application **form** are outputted. In this way, the introducer data are printed on the contract application **form**, so that failure of point addition or the like can be prevented because paperwork is carried out on the basis of the introducer data printed on the application **form**. In application for a prize, a commodity equivalent amount and a withholding **tax** amount are calculated and stored in a prize pool file. In this way, processing for sending a prize and withholding **tax** processing are carried out automatically at the same time, and consequently, paperwork can be reduced.

ABSTRACT

PROBLEM TO BE SOLVED: To establish a pioneering processing system for computer society by actualizing the schedule unified management of actions by respective applications or declarations and registration to law courts, the nation, prefectures, the Legal Affairs Bureau, **tax** offices, etc., and accompanying operation implementation and its history by regarding the greater part regarding judicial administration.

SOLUTION: In the judicial action **database** system, judicial action information such as register information, trial information and law action

information are integrated in units of a document such as declaration **forms** for every kind as case numbers, grouped and discriminated by giving group numbers, and judicial actions consisting of the persons concerned, persons in charge, clients, real estate locations, jurisdiction, credit, law actions, etc., are itemized as to the document such as the declaration **forms** and operation kinds and time information are attached to respective pieces of the itemized information, then relative information are chained in crisscross by using them as index keys to constitute a judicial action relational **database**, thereby performing instantaneous retrieval among the items.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a system and a method for maintenance management of a structure, which enable financing from an insurance system, a rental system, securities, etc., by improving a management system for a structure only by **tax** and subsidies by making it possible to introduce private funds while securing safety as to an intermediate or small-scale decentralized type structure, and its content file storage device.

SOLUTION: The cost for maintenance management is accurately assessed by quantitatively diagnosing the states of a bridge and other structures and evaluating the performance, so a structure data file 46 which makes it possible to continuously store and compare the state of the structure is provided and the remaining life and endurance are quantitatively grasped by objectively diagnosing the state of the structure or evaluating the performance under the assistance of a structure expert to **form** a structure data file as a **database**. Consequently, the cost for the maintenance management is properly assessed and private funds can be introduced.

APPL. NO.: 11-376402 [JP 99376402]
FILED: December 09, 1999 (19991209)
INTL CLASS: G06F-017/60 ; G06F-019/00

ABSTRACT

PROBLEM TO BE SOLVED: To generate the accounting data which are needed for calculating the **tax** amount and for producing a final return **form** by means of a computer and also to properly supply the generated data in response to a user's request.

SOLUTION: In this method, a 1st **database** is used to store plural items which are corresponding to plural transactions and can be selected. A user selects an item corresponding to his/her relevant transaction from the 1st **database** and inputs the numeric value to settle the transaction on a computer display. Furthermore, a process is prepared to provide a 2nd **database** which stores previously an accounting decision reference to decide the project earnings. Thus, it is possible to extract the information on the decision reference necessary for deciding the project earnings from the totalization of the item and numeric value selected and inputted by the user from the 2nd **database**. Then the information on the decision reference is reflected on the totalization of the item and numeric value, so that the accounting data necessary for calculating the **tax** amount are produced from the data accumulated as the daily transactions and can be supplied to the user.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a device for preparing account subject itemized statement and corporation business summary description for corporation **tax** application, with which an application **form** can be speedily and exactly filled and input work efficiency is high while being

linked with a financial account system even with shallow **tax** matter knowledge and experiences.

SOLUTION: This device is provided with a master data base 41 composed of a basic corporation information table 41a and a subject information table 41b and a detailed information **database** 43 preserving applied contents inputted to the itemized statement and calculated and when inputting the prescribed item of the itemized statement related to an account subject having an auxiliary item, auxiliary subject itemized data prepared by the financial account system, which has an account subject information **database** 42 provided with an auxiliary subject itemized table 42a and executes the job of a company, are accepted so that the account subject itemized statement and the corporation business summary description can be automatically prepared.

Abstract (Basic): US 20050021410 A1

NOVELTY - The system has two terminals connected to a central **database** (3) via a network (2). One of the terminals is provided with equipment for entering purchase data for each purchase occasion. Another terminal gathers an electronic cheque belonging to references from the **database** . A consumer's receipt (7) is compared with the purchase data for corresponding electronic cheque in order to check accuracy of a refund that is paid.

USE - Used for handling refund of a sales **tax** e.g. value-added **tax** to a consumer.

ADVANTAGE - The utilization of the electronic cheque shortens the lead time with respect to the shops, such that the shops avoid all work connected with entering of tourist data. The system considerably increases rate of customer flow in the shops, and reduces manual handling of receipts and **forms** to a great extent for the shops.

DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of a system for handling of refund of a sales **tax** e.g. value-added **tax** to a consumer.

| US 20040078271 | A1 | 44 | G06F-017/60 | |

Abstract (Basic): US 20040078271 A1

NOVELTY - The method involves accessing a tax information database to retrieve aggregate tax reporting information and transactional tax reporting information corresponding to the aggregate tax reporting information. The acquired aggregate tax reporting information and corresponding transactional tax reporting information are then displayed and reported in tax form on a screen for a client.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Tax reporting system;
- (b) Computer program product storing the program for tax reporting; and
- (c) User interface for tax reporting system.

USE - Used by various financial institutions for reporting taxable and non-taxable distributions, gains, and losses of investments including provision of access to tax information regarding the investments and provision of various functions pertaining to tax information. For any number of kinds of tax information and investment information including tax information associated with investments in any kind of investment, banking or trust account such as brokerage accounts, checking accounts, savings accounts, loans and mortgages, trust accounts, certificates of deposits, credit card

accounts, and employment-related accounts.

ADVANTAGE - Provides a method for **tax** reporting that can be applied to any financial or credit instruments in which transactions involving one or more such instrument can be assigned an economic or monetary value, or in which an investor's current position involving one or more such instruments can be assigned an economic or monetary value. Uses **tax** reporting technology that provides flexibility, modularity, reliability, scalability, speed of execution and data security.

DESCRIPTION OF DRAWING(S) - The figure shows a networked environment in which the **tax** reporting method is implemented.

| JP 2004126910 | A | 11 | G06F-017/60 | |

Abstract (Basic): JP 2004126910 A

NOVELTY - A recognition server (13) recognizes the kind of a document based on the character data input by a user using a personal digital assistant (2). A web **form** is generated corresponding to the kind of the document and transmitted to the user. The user inputs the credit card number and the personal identification (PIN) code in the **form** and the **form** is sent to the apparatus for processing operation.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for web **form** processing method.

USE - For receiving document information from personal digital assistant of user, through a network during payment of public utility charge, **tax** and purchasing of goods using credit card.

ADVANTAGE - The burden of the user is reduced and the web **form** is processed in an efficient manner.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic view of the document information reception apparatus. (Drawing includes non-English language text).

Abstract (Basic): US 6684189 B1

NOVELTY - A personal computer (PC) (2) of employee has data input screens (4) to display **forms** received from digital computer (8) through communication system (6), for soliciting entry of financial product selection criteria e.g. health criteria and sex. The selection criteria are transmitted to computer (8), to provide a quote for financial product at the PC accordingly, using front end network gateways.

USE - In data processing system for searching financial products such as life insurance e.g. permanent life insurance, universal life insurance, joint life insurance policy, joint and survivor life insurance policy, variable life insurance, annuity e.g. immediate annuity, deferred annuity, mortgage e.g. home equity mortgage, balloon repayment mortgage, fixed interest mortgage, variable interest mortgage, **tax** favored account, individual retirement account, Keough plan, 401(k) plan, security, zero coupon bond, US treasury derivative

and municipal bond.

ADVANTAGE - The quote for a financial product is provided quickly at the employee personal computer, without requiring much labor from the employee.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic view of computerized insurance and mortgage illustration system.

|----------------|------|-----|----|-------------|--------------|
| US 20030233296 | A1 | | 23 | G06F-017/60 | |

Abstract (Basic): US 20030233296 A1

NOVELTY - The method involves establishing a communication link between an input/output device to an official government **database** (3a) having taxpayer information. The information is downloaded from the **database** using a **form** generation engine to the device. The information is filtered to yield **form** generation information to generate a **tax form**. The **form** is filed electronically with a governmental taxation authority.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) a **form** generation engine
- (b) a computer readable medium having stored sequence of instructions executed by a processor
- (c) a method for generating **tax** return for a taxpayer.

USE - Used for generating a completed **tax form** for a government department.

ADVANTAGE - The method enables a user to access the **database** to download information, and **forms** can be automatically prepared using

the downloaded information. The user can compare user input data with the official downloaded data to save time and avoid errors in the information.

DESCRIPTION OF DRAWING(S) - The drawing shows an automated system for retrieving information from an official government **database**.

AU 2003217855 A1 G06F-017/60 Based on patent WO 200377178

Abstract (Basic): WO 200377178 A2

NOVELTY - The method involves gathering information relating to proprietary rights status of planting, and entering information into a **database**. The **database** is arranged to link related information. The information in the **form** of a crop certificate is disbursed. The certificate has a **tax** parcel identity to identify the location of planting, and quantity and specific cultivar data for each plant, and plant patent license status.

USE - Used for generating crop e.g. fruit trees and grape vines

certificate.

ADVANTAGE - The **database** is a collection of data pertaining to the location, ownership, patent and trademark status of commercial plantings in a given geographical area, thereby linking the data to allow searching according to a variety of criteria. The data are selected and arranged according to needs of the user.

DESCRIPTION OF DRAWING(S) - The drawing shows a flowchart describing a crop certificate generating process.

| US 6556976 | B1 | 14 | G06F-017/60 | |

Abstract (Basic): US 6556976 B1

NOVELTY - The system (10) connected to network (26), includes a commercial website server (16) that is provided with several modules. The modules determine the class of the customer accessing the network, using the customer information stored in **database** (20), to generate purchase price scheme, cost reduction options, purchase plan and special bidding option for each customer.

USE - For providing information regarding processing waste food, paper at restaurant, residence, steel factory, grocery store, textile industry and financial institution. Also for providing guidance to customer for filling **tax forms** and claiming **tax** deductions and for other e-commerce transactions.

ADVANTAGE - Incorporates effective modules that provide exceptional and advantageous solutions such as cost reduction options, default vendor pricing options to customer appropriately.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the online shopping support system.

| KR 2003020096 | A | | 1 G06F-017/60 | |

Abstract (Basic): KR 2003020096 A

NOVELTY - A purchased payment returning method is provided to enable a customer to search for commodity data at an internet shopping mall, to receive an online quotation and process an order **form**, to check a delivery state of the purchased commodity or visit a store or an agent office for taking the purchased commodity, and to return the payment of the purchased commodity for a regular period by connecting an internet shopping mall to an offline store.

DETAILED DESCRIPTION - A customer accesses an internet shopping mall site linked to an offline store or an agent office. A shopping mall operator or the customer inputs data on commodities at a large scale **database** server. The customer searches for desired commodity data in the **database** server by inputting a commodity number or a commodity name or clicking on an item among a directory. A server of the shopping mall issues an online quotation to the customer and processes an online purchase order **form**. The customer checks a delivery of the commodity or visits an offline store or an affiliated agent office for taking the purchased commodity. The server orders an agent worker to inspect, install or test the commodity. A **tax** bill or a receipt is issued to the customer, and then the customer pays the commodity. The server processes an online after service management system by inputting personal data of the customer, specifications of the commodity and a breakdown history or offering a periodic after service data.

Abstract (Basic): US 6473741 B1

NOVELTY - The complete **tax** returns received over the Internet is stored in original **form** in a central **database** . Statistically significant information is generated from **tax** returns and stored in another **database** . A required data from the statistically significant information is retrieved and transmitted according to a user's request and a fee for retrieving and transmission is charged to the requested user.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for electronic complete **tax** returns storage and transmission system.

USE - For electronic exchange of **tax** data through Internet between financial services industry including lending industry and/or other interested parties such as data mining firms and **tax** preparation firms.

ADVANTAGE - The exchanged data is downloaded directly into applications of end users for analysis, thus reducing or eliminating labor and costs due to data entry, filing, etc. The lenders and other interested parties have some assurance that information received directly from a professional **tax** preparer has not been altered in a fraudulent manner.

DESCRIPTION OF DRAWING(S) - The figure shows a flow diagram of electronic complete **tax** returns storage and exchanging process.

Abstract (Basic): KR 2001098236 A

NOVELTY - A method for performing exportation and importation using the Internet is provided to check a transportation schedule, freight charges, or the likes without a guide, and improve reliability.

DETAILED DESCRIPTION - A shipper(10) accesses a forwarder, confirms a transportation schedule and a space, checks over freight charges, negotiate the freight charges, and performs a booking. The shipper makes out a document necessary for shipping request, stores the same in a **database**, and transmits the same to the forwarder(20). The shipper fills in an application **form**, transmits the same to an organization, and receives an application document from the organization. The forwarder stores the document transmitted from the shipper in a **database**, completes the shipping by using the document, and transmits a document to the shipper(10). The shipper stores the document received from the forwarder in a **database**, searches a document necessary for a payment or a **tax** refund, and transmits the document to a customhouse and a negotiating bank. The shipper receives information, that the document is received and the certain amount of money is received, from the negotiating bank.

Abstract (Basic): US 20010021270 A1

NOVELTY - An image retrieval circuit retrieves a preregistered image when a read document size is smaller than a preregistered image size, and rotates the read document in predetermined direction, when the read document size is larger. Extracted document features are matched with preregistered image feature sequentially, to determine the document type.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for image collating method.

USE - For collating A3 or A4 sized transfer application forms used for payment of municipal taxes and public utilities charges such as gas, water, electricity with preregistered images of transfer application forms, in banks, post office.

ADVANTAGE - An application form can be collated accurately in the case where the application form is read by an image reader that is capable of reading only a part of the application form in bank having a database with image of whole application form preregistered for collation. Also the collation is accurate in the case when the application form is read by an image reader capable of reading the whole of the application form in bank having a database with the image of only a part of the application form preregistered for collation. Hence the whole or part of either the A4 or A3 sized application form can be matched by the image reader as long as one of image sizes is preregistered. Collation with the preregistered image is possible regardless of the direction in which the application form is placed on the image reader.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the image collating apparatus.

Abstract (Basic): JP 2000215263 A

NOVELTY - Transaction data of an enterprise, is input via terminals (11-1-11-n). An interface unit (2) extracts **form** code identifying calculation subject using which classification is done based on service code, and cost element identifying service activity of enterprise relative to transaction data. A classification processor (3) classifies transaction data based on service and **form** codes.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(a) transaction data accounting procedure;

(b) memory medium for storing transaction data accounting program

USE - For processing transaction data used for understanding financial condition, profit and loss of an enterprise, and also used for calculation of **tax** or report to stock holder.

ADVANTAGE - Information about financial condition, profit and loss of enterprise can be easily produced from the transaction data.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of accounting information processing system.

Abstract (Basic): JP 2000113083 A

NOVELTY - Electronic documents are produced on the basis of **form** definition and stamp **tax** is calculated on the basis of taxation definition, performing electronic settlement of accounts between settlement of accounts servers (160). Electronic revenue stamp equivalent to amount of stamp **tax** added to electronic documents is sent to companion client (120).

DETAILED DESCRIPTION - The client receives taxation definition and **form** definition of the amount of **tax** regarding documents from taxation business **database** server and it purchases and manages the electronic revenue stamp from the electronic revenue stamp issue server. An INDEPENDENT CLAIM is also included for electron documents processing apparatus.

USE - For electronic commercial transaction.

ADVANTAGE - Revenue stamp **tax** is paid efficiently, reducing the work of **tax** payer's office.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of electronic documents processing system.

ONLINE HELP: NEED A TAX BREAK? SURF THE NET: The myriad resources on the Web may alert you to deductions, exemptions, and other strategies

Dean Foust

EDITED BY TODDI GUTNER

Business Week, Number 3512, Pg 140

February 3, 1997

JOURNAL CODE: BW

SECTION HEADING: Personal Business: YOUR TAXES ISSN: 0007-7135

WORD COUNT: 1,280

TEXT:

... But before acting on a tip from cyberspace, consider getting a second opinion from a **tax** pro.

SKIMPY INSTRUCTIONS. One of your first stops on the Infobahn should be the **Internal Revenue Service's Web site** --if you can get through the gridlock. The **IRS site** is surprisingly colorful, with a home page made to look like a supermarket tabloid. You can download every necessary federal form and schedule, as well as **IRS** bulletins and instruction books. There's also an interactive questionnaire that lets you determine whether you qualify for certain deductions, such as educational expenses. On the downside, the **site** is poorly organized, and it offers few instructions for neophytes who want to download forms...

...On repeated attempts to visit the site in mid-January, before the height of the **tax** season, it still took days to get through. How will the **site** handle traffic in mid-April?

If it's just a **tax** form you need, bypass the **IRS site** and check out Taxing Times 1997, offered by Maxwell Technologies, a San Diego company. Maxwell...

...for people to get tax help. The first place to look is right in the **tax** package. The package's new design makes it easier to find information. For those people with **Internet** access, the **IRS** 's homepage has forms, publications and lots of helpful **tax** information. For those who don't have a computer, the **IRS** has special toll-free numbers for whatever help a taxpayer might need.

TAX HELP ON - LINE

The **IRS** 's homepage on the World Wide **Web** has proven to be a popular source for both **tax** forms and **tax** information. Since coming **on line** last January, taxpayers have accessed the web site more than 100 million times and have received over three million forms and publications. Anyone with **Internet access** can receive:

- **tax forms** , instructions, and publications;
- the latest **tax** information and **tax** law changes;
- **tax** tables and rate schedules;
- hypertext versions of Publication 17, "Your Federal Income Tax"
- taxpayers can... churches or community centers. Taxpayers should check their local newspapers to find these site locations.

TAX FORMS

On - Line

Taxpayers with **access** to a personal computer, a modem and a printer can download most **tax** forms and publications from the **IRIS** or, for those with **Internet** access, the **IRS** homepage.

By Fax

Taxpayers can receive about 100 different **tax** forms 7 days a week, 24 hours a day from **IRS** TaxFax. In addition to forms and instructions, taxpayers can receive faxed copies of TeleTax topics...

Treatment: Practical (P); Product Review (R)

Abstract: Business Profiler, available on CD-ROM and the Internet (<http://www.integrainfo.com>), was developed for the business professional who needs industry ratios and benchmarks that are appropriate for the privately held company. While privately held companies are not required to file financial statements with the Securities and Exchange Commission, the **Internal Revenue Service (IRS)** gathers data from these companies' tax returns and publishes it in the **IRS Corporate Source Book** in an aggregate form by industry. Integra created the Business Profiler from this **IRS** data, together with data from over 30 other sources, such as SEC 10K and 10Q filings, U.S. Department of Labor, Department of Commerce, Census Bureau, Federal Reserve Board, and Integra's proprietary **databases**. This powerful **database**, representing over 3.5 million U.S. firms and over 900 industries, provides a broader and more reliable view of industry performance. (0 Refs)

Abstract: A new method for registering **forms** has been developed at the National Institute of Standards and Technology. This method automatically estimates the amount of rotation and translation in the image without any detailed knowledge of the **form**. This is accomplished through the automatic detection of dominant vertical and horizontal structures (lines) commonly found in **forms**. A general method for rotation estimation and a robust method for translation estimation are presented. Results demonstrate that this technique is extremely tolerant to spurious annotations on the **form** and scanner noise in the image, and the computational requirements of the utility can be tuned by optionally choosing to process and analyze downsampled versions of the image. All 3,669 Handwriting Sample **Forms** distributed with NIST Special **Database** 19 were successfully registered with the new technique, and using the same code, 255 uniformly laid out **IRS tax forms** and 500 Census miniforms were also tested and registered. Every type of **form** contained in the numerous NIST (public) **form databases** can be registered using this technique. These results also demonstrate how easy it is to set up the computer to register new types of **forms**, introducing a setup interface that is much more automated and less tedious than what is currently required to specify new **forms** for the NIST public domain **Form**-Based Handprint Recognition System. (12 Refs)

Abstract: The reading of names and addresses is one of the most complex tasks in automated **forms** processing. The paper describes an integrated real time system to read names and addresses on **tax forms** of the **Internal Revenue Service** of the United States. The Name and Address Block Reader (NABR) system accepts both machine printed and hand printed address block images as input. The application software has two major steps: document analysis (connected component analysis, address block extraction, label detection, hand print/machine print discrimination); and document recognition. Document recognition has two non identical streams for machine print and hand print; key steps are: address parsing, character recognition, word recognition and postal **database** lookup (ZIP+4 and City-State-ZIP files). Real time throughput (8,500 **forms** per hour) is achieved by employing a loosely coupled multiprocessing architecture. The functional architecture, software design, system architecture and hardware implementation are described. Performance evaluation on machine printed and handwritten addresses are presented. (5 Refs)

Title: The IRS 's \$8 billion systems overhaul

Author(s): Miles, J.B.

Journal: InformationWEEK no.315 p.28-30

Publication Date: 8 April 1991 Country of Publication: USA

CODEN: INFWE4 ISSN: 8750-6874

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: The **Internal Revenue Service** (IRS) is planning an \$8 billion IS project to improve its processing of more than 200 million **tax** returns annually-and hopefully improve its public image in the process. The

IRS game plan centers around what it calls **Tax Systems Modernization (TSM)** projects which, taken together, **form** the first stages of a master design for comprehensively updating the current patchwork of paper-based systems into an upscale, integrated architecture for the 1990s. This translates into the eventual storage and receipt of all **tax** returns and remittances in electronic **form**, and the automatic conversion of all **tax** return information from digital images to the ASCII format. Nationwide, it will entail the development of a grid of integrated computer systems and **databases**, **on - line** access to taxpayer information, and integrated tracking and control of ongoing case information. (0 Refs)

Title: Few banks opt for electronic tax filing

Author(s): Vacca, J.

Journal: Computers in Banking vol.7, no.5 p.12, 14, 20

Publication Date: May 1990 Country of Publication: USA

CODEN: CBANE6 ISSN: 0742-6496

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: With the 1990 **tax** season over, how well has the **Internal Revenue Service** 's Electronic Filing System (EFS) performed? **IRS** claims of refunds being directly deposited to bank accounts in as little as three days from the time the **form** is filed are at best exaggerated. Bankers say a three- to five-week turn-around is closer to the truth. System outages at **IRS** centers, **networking** problems, lost computer tapes, and human filing errors, have all contributed to the longer turnaround. Nevertheless, despite the apparent problems, EFS's popularity continues to increase. The number of returns filed electronically has increased from 25000 to 1.2 million in four years. (0 Refs)

Abstract: **Tax** software manufacturers in the USA are keen to offer their customers the latest, most up-to-date software possible. When **tax** software for individuals first began appearing, the programs could only handle the basic **tax** schedules and **forms**. Revisions now offer conveniences such as the inclusion of various state **tax forms**, special **IRS** schedules, pop-up modules, current **tax** tables, extensive **on - line** help, enhanced speed and ease of use, and improved **tax form** printing. However, while **tax** programs can save time and help you plan your **taxes** better, they are only as good as the effort you put into preparing your data. (0 Refs)

Abstract: The latest developments and approaches in storage and retrieval methods are bringing archival records into view much faster. Optical disks are presently being seriously evaluated by governmental, and some corporate, organisations. The most important development in disks involves the **Internal Revenue Service**. It is currently testing and reviewing a program which will ultimately result in all 1040 **tax forms** being stored on disk, allowing the originals to be destroyed. Microfilm usage is also up. Yet the obvious reason for increasing microfilm usage, that of space savings, is not the main reason. Preservation of originals, where the original is wearing badly, is the main reason for microfilming. Off- **site** storage centers for archives have also grown dramatically. Most off- **site** storage facilities provide courier services to deliver important documents to clients within four hours of receipt of request. (0 Refs)

Title: The IRS tests online filing

Author(s): Egger, R.

Journal: Government Data Systems vol.15, no.3 p.16-18

Publication Date: April-May 1986 Country of Publication: USA

CODEN: GVDSBD ISSN: 0046-6212

Language: English Document Type: Journal Paper (JP)

Treatment: General, Review (G); Practical (P)

Abstract: The US **Internal Revenue Service (IRS)** is exploiting means of bypassing manual paper processing. To cut the logjams caused by the growing numbers of **tax** returns filed each year, the **IRS** has launched an electronic filing pilot project in Cincinnati. The pilot, which began in January 1986, involved several **tax** preparation firms who sent the return of clients wishing to participate in the project to the service center directly over telephone wires. The early results confirm the belief that electronic filing means more accurate returns, processed in shorter periods at a lower cost to the government. For the taxpayer it means a quicker refund without the worry of sending bulky **forms** by mail. And for the preparer it means less paper work and more satisfied clients. The project could go nationwide by 1988. (0 Refs)

BARA RIKSDAGEN KAN STOPPA PUMA
SWEDEN: SWEDISH IRS TO LAUNCH "OPERATION PUMA"
Dagens Industri (DI) 06 June 1996 p. 10
Language: SWEDISH

The new official computer system and **network** code named "Operation Puma" designed by the Swedish National **Tax** Board <RSV, the Swedish equivalent of **IRS** in USA> will be operational by 1 January 1998 as planned. The Swedish National Data Inspection <Datainspektionen> hasn't made any negative comments around the implementation of this new strategic programme, aimed at eliminating most **forms** of **tax** evasion throughout Swedish business life by an extensive control and monitoring of electronic information systems. Trade unions like Byggnads <the construction sector> Restaurang and Transport have all supported the introduction of "Puma" and its dawn-raid style of operations, as has SPP, Almi and AMF. Thus, only a political decision, or lack of political resolve, remains the sole obstacle for "Operation Puma", the paper sums up.

ATX's Max, 1099 Pro's 1099 Pro 2002, and J. K. Lasser's Your Income **Tax** 2003 are among professional **tax** preparation products described. ATX's new **Total Tax Office**, which emerged after a merger with Kleinrock Publishing, combines ATX Max with the 24 volumes of Kleinrock **tax** research. Also included is Zillion- **Forms**, which provides over 8,000 **tax forms** and printed federal **tax** bulletins distributed every two weeks. **Total Tax Office Plus** adds unlimited easy electronic filing with no per-transmission fees, unlimited **Web** Organizers, printed instruction manual, training video on CD, and Kleinrock's California, New York, and Employment TaxExperts. Traditional Max and Max Plus are still available, and the Saber

1040 program is provided in an enhanced **Tax** Office version. 1099 Pro 2002 is available in small business and enterprise versions. W2 Pro Professional files **forms** W-2 and W-3 either electronically or on Magnetic Media I, the new MMREF format from the Social Security Administration. Lacerte Software provides other software with its **Tax** Planner, which integrates with the Lacerte Individual **Tax** Program. In the Planner, the user can choose among four types of **tax** plans and project the client future **tax** liability in multiple scenarios. Your Income **Tax** 2003 is an 800-page reference with complete information on **tax** calculation. Each section has more information, including filing tips, planning reminders, cautions, law alerts, court decisions, and **IRS** alerts.

ATX's Total **Tax** Office, Nelco/Greatland's Great **Tax** , and Dunphy Systems' Dunphy Systems **Tax** Preparation Software are among many products highlighted in this discussion of **tax** preparation products to be available for the 2003 **tax** season. There are fewer vendors than in 2002 due to acquisitions and consolidations. Those left standing have added such enhancements as new **forms** , calculators, and functional improvements. The many **tax** law changes legislated in 2001 are also covered in the **forms** for the first time in 2002. Total **Tax** Office is a product emerging from UGC, the new parent of ATX and is an integrated **tax** preparation and research product that combines Max with Kleinrock TaxExpert. ATX **Forms** , which is now called Zillion **Forms** , is included in Max and provides over 8,000 **forms** . Great **Tax** is a new **tax** preparation product that emphasized fast processing, integrated e-filing, a client organizer, and customized reporting. Nelco continues to provide refund anticipation loans through bank One, Household Bank, and Santa Barbara Bank and Trust. Dunphy Systems **Tax** Preparation Software has new **forms** , and updates will be available on a **Web** site and bulletin board. E-filing will support the state-only option, and preparers will be able to e-file at the state level without e-filing the federal return, but can still transmit the federal return to the **IRS** .

Adobe Systems' Adobe Acrobat 5.0 was used by Plexus, experts at the IRS Alternative Media Center, and project managers from Adobe to build a structure tree that provides navigation and fill-in abilities for **online IRS tax forms**. These **forms** can be filled in **online** by blind and visually impaired taxpayers. Section 508, a federal regulation, requires federal IT systems and **Web sites** to be accessible to those with disabilities. Curtis Chong, director of technology for the National Federation of the Blind, says the **IRS** effort is an interesting project with significant potential for making digital **forms** more accessible. Visually impaired taxpayers were able to obtain text from a Portable Document Format (PDF) **form** and use it in a simple notebook program where a screen reader for the blind would read it out loud. However, they needed assistance in entering the information **online**. With the new road map, visually impaired users can proceed through complicated documents in the same order used by sighted users. The blueprint also halts screen readers to allow users to fill out the **forms** as they progress. At a conference during which the solution was presented to agency managers responsible for Section 508, Adobe also debuted PDF **Forms Access Agent**, a product that allows users to create PDF documents eight times faster than previously.

The Internal Revenue Service has created a talking tax form for people with visual impairments. The system allows visually impaired individuals to read electronic versions of the 1040A and 1040EZ tax forms. The IRS plans to expand the service to several of the most frequently downloaded tax forms. The system is based on new technology developed by Adobe Systems and Plexus Scientific. The companies worked with the IRS to develop the software, called Adobe PDF Forms Access. The software will be available at Adobe's online store. PDF Forms Access will help users quickly convert a standard PDF form into an accessible form. With it, users can capture the structure of a document, then modify it. Several other federal agencies have expressed interest in the software. The synthesized speech results are very good, and the technology is improving. The new forms cannot calculate taxes like commercial tax preparation software does. Although the IRS evaluated adding the option, the agency was barred from adding the feature under pressure from the tax preparation industry.

Intuit's ProSeries/ Web Organizer, Tax Simple's etaxsimple.com, and Lacerte Software's E-Organizer are highlighted in this discussion of the expanding use of e-filing and online tax preparation tools by professional preparers. For instance, says one CPA, his firm has been able to convince staff and clients of the advantages of e-filing through training and education, and last tax season did converted 94 percent of returns to e-filed formats. Tax software vendors report similar results,

and a spokesperson says the **IRS** and professionals are doing their job in educating people about the benefits of e-filing. Most vendors also say they have had few problems with their **tax** packages. An Orrtax spokesperson says the number of difficulties with the software has dropped from an average of about 4.5 per year to almost zero. Most problems had been created by state agencies, which have been improving their systems. E-filing is now much easier than in the past. Practitioners also get an acknowledgment for e-file returns and a date stamp. Intuit's **tax** professionals can check the status of any e-filed return **online**, and 29 more **forms** and schedules can be filed electronically. Topics covered include guide to **tax** software bargains; increasing consumer demand; **online** tools, including Etaxsimple.com, a fee-based electronic filing service, and E-Organizer, which will allow practitioners to send **tax** organizers to clients by e-mail.

ItsDeductible, **IRS** e-file and EFTPS (Electronic Federal **Tax** Payment System), TaxCut, Quicken, QuickBooks, ATX's **MAX**, and Intuit's Quicken TurboTax Deluxe are highlighted in a discussion of recent editions of **tax** programs available for the 2001 **tax** year. Also discussed are Adobe Systems' Adobe Photoshop Elements 1.0, a mid-level digital photo-processing package. **MAX tax** preparation software has new features and covers all federal and state taxation, and taxation for over 300 cities in over 300 programs. All needed **forms** are available, including those for city, school district, sales and use, applications, foreign, estate, gift, and other **tax** -related matters. **Forms** automatically self-link among fields, and built-in spreadsheets are provided. TurboTax Deluxe includes all basic features of TurboTax, with added features, including **IRS** Publications, Video Advice from financial experts, **tax** planners, and IRA and Life Events Planners. Users can import Quicken and QuickBooks data and transfer **tax** data from 2000 returns prepared with TurboTax or TaxCut. For those who have made charitable donations, ItsDeductible can establish and track donations and provides fair market values for noncash contributions for thousands of often-donated items, including clothing. ItsDeductible tracks

monetary, mileage, and out-of-pocket donations. e-file is the fastest way to file and pay income **taxes online**, and EFTPS is for **tax** preparers, accountants, and payroll services.

Tax accounting software vendors are enhancing their Web offerings with electronic filing and other online features. Universal Tax Systems' TaxWise Executive Package is a flexible offering that, although not targeted at e-filing, includes the federal and one state 1040, and all business and entity modules for that state. All of Universal's offerings are consistent, and so users will be familiar with the business program because it functions like the TaxWise 1040 program. Specialty programs are available, and state returns are integrated with the federal returns. Intuit's ProSeries Business Bundle gives users a choice of any three federal business tax programs, choosing from the 1120, 1120S, 1065, 1041, and 990. CCH's Specialty Return e-filing bundles also adds something extra to the tax season. The returns include the Form 4868, 1040NR, and 5500. Users also get the ability to electronically file through the Business and Specialty Electronic Filing License bundle.

Updated programs like CCH's ProSystem fx, ATX's ATX Forms , CPA Software's

Visual 1040, Lacerte's NetTax, and Orrtax's IntelliTax offer a range of new accounting features. For example, CCH's ProSystem fx **tax** preparation program now integrates with **Tax** .CCHGroup.com's **online** research resources. The **Web** **site** offers access to **Internal Revenue** Code and Regulations. The CCH ClientRelate feature allows accountants to identify clients affected by new **tax** regulations. Lacerte also is employing an application service provider (ASP) model, offering its NetTax program **online** . ATX's free ATX **Forms** software offers users expanded calculation options. The updated program also incorporates new spreadsheet tools and supports batch printing. CPA Software's Visual 1040 and Visual Business **Tax** programs provide users with streamlined navigation tools. Finally, Orrtax, working with InsynQ, is offering users a **Web** -based version of IntelliTax for Windows. Beyond supporting professional accounting features, the **Web** **site** provides small businesses with access to the IntelliTax KwikTaxRefund module. This article also provides information on accounting programs from Laser Systems, Micro Vision, Petz Enterprises, RIA, **Tax** Simple, and other vendors.

Treasury Department's Electronic Federal **Tax** Payment System (EFTPS) is adding **Web** payments to its existing telephone and client/ **server** means of collecting revenue. Businesses that pay more than \$200,00 in annual federal **taxes** are required to use EFTPS, and many other businesses use it although they are not required to do so. There are 13 payroll-processing corporations that have dedicated, encrypted links to EFTPS, and these bulk filers send in about half of the revenue collected by EFTPS. EFTPS is different from the **IRS** 's electronic-filing program for **tax forms** in that actual payments are made through EFTPS. The work on EFTPS **Online** started about three years ago simply because that was the way the world was working. Security, of course, was a huge concern. An **IRS** security group participated in testing by trying to imagine every conceivable threat and design prevention, detection and containment responses.

As consumers increasingly adopt **online tax** filing and e-payment of **taxes** due, financial service providers are hoping that the trend will expand to include other financial business processes. The **IRS** has said it wants 80 percent of Americans to file their **taxes** electronically by 2007, and Terence Lutes, director of electronic **tax** administration for the **IRS**, says this goal is not too far-fetched. Due to the enactment of the Electronic Signatures in Global and National Commerce Act (E-Sign), for the first time in 2001, citizens could file fully paper-free **tax** returns. The **IRS** also provides on its **Web site** 23 new **forms** that can be filed electronically. Many taxpayers use shrink-wrapped software with electronic filing features for **tax** preparation. Examples include TurboTax, Kiplinger TaxCut, and Personal **Tax** Edge. These programs use an easy data entry design that asks some basic questions and puts the answers in the correct places on the **tax form**, while avoiding the complexity of the 1040 **form**. The **IRS** has selected partner companies that assist in easing electronic **tax** filings and credit card payments, including H&R Block, Intuit, and Gilman & Ciocia, which runs the [el040.com Web site](http://el040.com). The banking industry could capitalize on the **IRS**'s aggressive push toward e-filing because, for instance, 'people who work with accountants who favor electronic filing may also start using banks for other services such as account aggregation.' Services available from H&R Block/Yahoo!, Nationtax Online, Juniper Financial, and Taxes4less.com are described.

Intuit's Quicken TurboTax Deluxe for 2000 gets very good marks overall, especially for a new Automated **Tax** Return feature with which users can import information from multiple sources directly to the needed **forms**. Users also can view better videos with integrated graphics and illustrations that make **tax** advice provided easier to understand. TurboTax Deluxe will electronically file the return at no cost and give the user a free copy of a state version, which is also available for downloading. TurboTax allows users to transfer basic personal information from the 1999 version of TurboTax, MacInTax, TaxCut, or TaxSaver. Users can still choose either the **Forms** Method or the EasyStep Interview method; those who do not know which **forms** to use should choose the EasyStep Interview Method. After all information is entered, TurboTax reviews the return for missing information, errors, or entries that could trigger an audit. The finished return can be filed electronically or printed and mailed to the **IRS** or state taxing authority. FAQs with answers to common questions are provided, and extensive help is available in the **Tax** Library. The Automated **Tax** Return feature imports data from all finance packages that create TXF files, including **Form** W-2s and some 1099s. TurboTax automatically puts ads for America **Online** and E*Trade on the user's desktop, a completely outrageous practice that should be stopped, and it also pops up the TurboTax Rewards screen with ads for financial and travel services.

Information systems of The **Internal Revenue Service** (**IRS**) of the U.S. and **tax** organizations in private companies have not gotten the budget dollars they need, while firms deployed expensive resource planning

(ERP) systems to bolster their **online** e-commerce activities. Steven Rainey, a partner in KPMG's eTax solution practice says, 'A lot of times **tax** departments bring up issues rather than solutions. Nontax people do not understand that **tax** is not a fixed number.' Currently, efforts are under way to make business **tax** planning and preparation easier, as the government tries to modernize its systems and make **tax** filing easier. For instance, several companies provide e-filing and **online tax form** filing services, including 1099 pro, Greatland, C&S Technologies, ACS Securities Services, Gemisys Financial Services, and **Tax** Technologies. The **IRS** also awarded a multibillion-dollar contract to Computer Sciences to modernize **IRS** systems under the direction of the Business Systems Modernization Program. The **IRS** has added to the list of **forms** that can be filed electronically, and a new regulation allows employers to first obtain an employee's permission and then provide a W-2 **form** electronically.

Intuit's Quicken TurboTax, Block Financial's Kiplinger TaxCut, and Microsoft's TaxSaver Federal are highlighted in a discussion of **tax** preparation tools that allow taxpayers to file returns electronically. Users can purchase a CD-ROM program such as TurboTax, TaxCut, or TaxSaver; fill out the return at an **IRS**-approved **online site**, such as turbotax.com, taxcut.com, taxact.com, or filesafe.net; or use an **IRS**-approved **tax** preparer, who is usually an accountant who can fill out the return and e-file it for the taxpayer. Taxpayers can find an approved **tax** preparer by filling in a zip code in the **IRS** search field. Irrespective of which method is chosen, the **IRS Form 8453 U.S. Individual Income Tax Declaration for Electronic Filing** must be mailed through the U.S. Postal Service (USPS). To pay any **taxes** owed to the **IRS**, the **IRS** provides multiple payment options. People can authorize a direct debit from a checking or savings account, or pay by credit card or check. Advantages of e-filing include guaranteed delivery, improved accuracy of numerical calculations and an overall lower error rate for all returns, quicker refunds, state filing concurrently (in 35 states and the District of Columbia), instant **forms**, and the ability to file early and pay later.

E-filing is most suitable for those who can use **Form 1040EZ** or have uncomplicated 1040 returns, since the **IRS** cannot yet accept some **forms** electronically. Advantages of **online** filing (vs. just using a PC) include lower cost and convenient access.

Intuit's Quicken MacInTax Deluxe 1999 for the PowerPC, a **tax** preparation package for filers of **IRS Form 1040**, gets excellent marks overall, especially for use of straightforward English definitions instead of jargon, the ability to file **taxes** electronically, and access to the most recent **tax** updates via the **Internet** . However, no upgrade is available for owners of earlier editions. MacInTax steps the user through tasks required to enter personal financial information, completes the needed **forms** using taxpayer-provided data, and computes the **tax** owed or overpaid. Explanations of **IRS** terms are easily accessible through hyperlinks, and those who like visual assistance can view concise but useful QuickTime presentations on many **tax** topics, including deductions, royalty income, and home office use. MacInTax Deluxe 1999 also supports multiple unusual **tax** scenarios, including deductible gambling losses that are equal to or lower than winnings, and special housing deductions for rabbis, cantors, and ministers. When the **tax** return is complete, taxpayers can file electronically through Intuit and pay with a Discover card. MacInTax Deluxe 1999's purchase price includes one free federal electronic filing and as many as four additional e-filings, each of which costs \$10. MacInTax Deluxe 1999 prepares only federal **tax** returns, but purchasers are entitled to a free (after rebate) copy of MacInTax State.

Intuit's TurboTax for the Web, an important component of Intuit's strategy for becoming an online provider rather than a vendor strictly of off-the-shelf products, helped Intuit's Internet projects generate 19 percent of sales, or approximately \$31 million in 1999. Quicken now represents only about 15 percent of Intuit's revenue, with the remainder coming from tax preparation tools. Because the Internal Revenue Service wants 80 percent of the population to file electronically by 2007, online vendors of tax preparation products are well-positioned to benefit from the trend. The IRS has also announced plans to reward electronic filers with a \$10 tax credit, while phone filers would be entitled to a \$5 credit. In 1999, Intuit sold 4.2 million TurboTax packages for the desktop, for which users generally paid about \$10 per package after rebates. Therefore, Internet filers are likely to pay more for TurboTax for the Web, which will cost \$9.95 per federal return and another \$9.95 for each state return. If Intuit can convince all Quicken users to use TurboTax for the Web and is thereby able to retain its market share, TurboTax for the World Wide Web will provide \$18 million in revenues for 2000. This is a hopeful estimate because high-quality TaxWorks free software will be available from H.D. Vest Technology Services, a group of tax preparers and financial advisory professionals, and H&R Block charges only \$4.95 for state forms. According to the founder and CEO of H.D. Vest, and to the project manager for TurboTax on the Web, branding is paramount in the online tax industry.

Tax practitioners are advised on how to obtain more from their existing software configurations by more fully exploring the capabilities of currently used products. For instance, a sole practitioner explains how Lacerte can do more than 'kick out a **tax** return.' All data input is accessible via **database** tools so users can search and do reports for just about all information entered in the system. A practitioner, for example, can find out what the adjusted gross income is for all clients, and can generate reports from 200 item categories, which can be searched or displayed from the client **database**. The practitioner also can customize the arranger feature of Lacerte, which is an organizer sent to clients in the early part of January. Customization helps identify clients. One practitioner writes his own questions, which complement the standard questions, and the organizer is returned by the client with specific information checked off as to the products in which the client might be interested. The practitioner explains that using the mouse with his left hand allows him to use the right hand on the number pad, which speeds completion of the return. When returns are finished and accepted by the **IRS**, an acceptance letter is sent to the client. A second practitioner explains more productivity and flexibility features of Lacerte. 17 1040 packages are compared for price, renewal price, pay-per-return, **network** price, multistate processing, data entry, **forms** supported, number of states supported, software distribution, electronic filing, operating systems supported, and new features.

Arthur Anderson's A.Plus. **Tax** Fixed-Assets Manager, Best Software's FAS

FirstStep 1999.2, Micro Vision Software's Fixed Assets Relief, RIA's GoSystem Fixed Assets, Decision Support Technologies' Bassets 98 Fixed Asset System, Creative Solutions' Depreciation Solution, MoneySoft's Fixed Asset Pro, and WorthIT Software's WorthIT Fixed Assets are software packages that keep multiple books and provide the basic depreciation methods. A-Plus is easy to set up and operate, but the reporting capabilities are a little light. Bassets 98 is very capable, but its documentation needs improvement. FAS is affordable, easy to run, and offers over 20 methods of depreciating assets. Depreciation Solution is a midlevel system and has a nice selection of reports, but it does not have export capabilities. Fixed Assets has a nice set of reports and all common depreciation methods are supported. Fixed Asset Pro has excellent basic asset management and depreciation capabilities, but it does not prepare **IRS forms** other than 4562. GoSystem provides the most common depreciation methods, and will allow users to create their own methods, and WorthIT is available in single, multi-user **network** and client/ **server** versions, but it does not have any fileable **forms** or a formal FASB 109 projection.

Four **online tax** filing services that are easier to use than **tax** preparation software packages are discussed here: Kiplinger TaxCut **1040EZ Online** from Block Financial, OneTax.com from Thomson, Universal **Tax** Systems' SecureTax.com, and **WebTurboTax** from Intuit. Kiplinger TaxCut **Online** is free for those filing the simple **1040EZ IRS tax form**. The service's stripped-down interface guides users through each step while explaining key **tax** concepts along the way. OneTax.com is the latest **tax** service **site** to emerge **online** and is a very helpful service that gives customers a lot of information and ways to reduce **taxes** for only \$9.95 per **form**. SecureTax.com offers a more streamlined **tax** preparation process with helpful wizards and guides to help users fill out their **tax forms**. **WebTurboTax** resembles the company's popular **tax** -preparation software packages and only asks questions that are relevant to the individual's **tax** needs.

Tax -preparation assistance available at the federal government's **IRS** site is described. Many links are available at the bottom of the home page, including the **Forms** & Pubs link, which allows users to download over 560 official **forms** and instructions and over 100 **IRS** publications. **Forms** and publications are also available via another link; the site is slow, and users can work more quickly by typing in the exact uniform resource locators (URLs), which are provided. **Forms** and publications can be used in Portable Document Format, PostScript, and HP-PC languages, and most are also available in Standard Generalized Markup Language (SGML). They can choose **forms** according to **IRS** number or the date of their last modification. A Fill-In **Forms** feature allows users to enter information while a document is shown in an Adobe Acrobat reader. For answers to particular **tax** questions, users can visit the **IRS Tax Info For You** department, which offers a subsection called **Tax Trails**. This feature steps the user through a question and answer session. Users also can download a copy of Pub 17, which has full directions for personal **tax** filing, along with sample returns, **forms**, tables, and a worksheet. Many other resources are highlighted, including Taxpayer Help & Education; Electronic Services; and Info For Business.

One of the biggest new trends on the **Internet** is electronic **tax** filing. The **IRS** has formally established the goal of having 80 percent of all **tax** returns prepared and filed electronically by 2007. In 1998, one in five taxpayers filed electronically. Most filed using the services of an **IRS** -authorized Electronic Return Originator (ERO), while others filed over the telephone using the **IRS** 's TeleFile system, and still others used their own PCs with third-party transmitters. There are likely to be several new services, including the ability to authorize debits of checking accounts. The **IRS** is also testing an electronic signature that will render the entire process paperless. Using a five-digit personal identification number, electronic filers will not have to mail a paper signature **form** to the **IRS** . Electronic filing offers many benefits, including more accuracy and quicker refunds. Although shrink-wrapped **tax** software is a significant market, there are major changes on the rise. The growth will not lie in the off-the-shelf software, but in **Internet** -based **tax** preparation services. **Web** -based filing is cheaper to use and offer, and vendors have no shipping expenses. It can also be accessed anywhere, and taxpayer data is available in subsequent years.

There are many World Wide **Web** **site** services and **tax** packages available from the **Internal Revenue Service** for those wishing to find hard-to-locate **forms** and file **taxes online** . A wealth of FAQs, help pages, and summarized **tax** regulations abound at the **IRS Web site** , and over 80 **IRS tax** publications can be browsed with the **Tax Products CD-ROM** offered by the **IRS** . Many business-related issues are addressed at the **site** , as are **online tax** help services. Despite popular opinion,

the **IRS** actually provides a wealth of information to know just how far individuals and businesses can go when including deductions in **tax forms**. Similarly, the avalanche of new **online** commerce **tax** laws are clearly explained at the **IRS site**. Included is a comprehensive guide to various **IRS tax sites**.

Computer Language Research's GoSystem Remote **Server**, Intuit's **WebTurboTax**, Orrtax Software's 1040 **Tax** Preparation, Drake Software's Drake's **Tax** Solution, and CCH's CCH ProSystem fx are products highlighted in a discussion of vendors' efforts to ease **tax** preparation by using the **Internet**. GoSystem Remote **Server** will be available for the first time after extensive testing last year. It permits users to enter data to a file, and to send the file to CLR over the **Internet**, where CLR will do the calculations on its own computer. This means that users can install a thin client and avoid upgrading desktop hardware for several years. **WebTurboTax** is an **Internet**-accessible personal **tax** preparation program for consumers that supplants TurboTax **Online**. The service uses Intuit's EasyStep Interview format, and provides more than 100 **IRS tax forms**, schedules, and worksheets, and returns for all 45 states that require incoming **tax** filings. Universal **Tax** Systems provides SecureTax, a **tax** preparation and e-filing application for the **Internet**, with which the users can prepare, print, and electronically file federal and state **tax** returns. Lacerte has a Live Update feature that downloads updates and checks the Lacerte Master Library to compare provided files to the user's system. The user is asked if a more current version should be downloaded. 1040 **Tax** Preparation will be available in a Windows version. A 32-bit Windows versions Drake's **Tax** Solution will be beta tested this year.

TurboTax Deluxe for Windows 3.x/95/98 from Intuit and Block Financial's Kiplinger TaxCut Deluxe for Windows 3.x/95/98 are the two leading **tax**-preparation software packages, though TurboTax's slick interview interface gives it the slight edge. Both programs have flexible data entry and import facilities, but TaxCut has the advantage with its better integration with data from Quicken and Microsoft Money. TurboTax now includes tables that speed up the data-entry process, reducing what used to take six screens to accomplish down to a single interface. Both packages offer great context-sensitive help tools and hundreds of **IRS forms**, as well as many ways to electronically file **tax returns online** with the **IRS**.

Four **tax** preparation software and World Wide **Web site** packages, including TurboTax from Intuit, Thomson Financial's Thomson Investor's **Network** Division's OneTax.com, SecureTax.com from Universal **Tax** Systems, and Block Financial's Kiplinger TaxCut Deluxe, are compared here just in time for the April **tax** deadline. TurboTax now features an improved user interface with a browser-like way to quickly access the program's many screens. Kiplinger TaxCut Deluxe, which is considerably less expensive than TurboTax, offers **online** filing, multimedia help menus, and better navigation. SecureTax.com includes thousands of **IRS forms** and a 2-minute refund calculator, but many glitches mar this new **Web site**'s offerings. Similarly, OneTax.com has many problems to iron out concerning how the **site** integrates with the **IRS ' Web site** .

Claims

Claim

... to additional customers
rules (e.g., create a fictitious pro in a zero programming, zero
forma order with no customer workflow engineering environ
and missing suppliers) will not ment
corrupt data...business,
web-based electronic commerce system is composed of one or more unitary,
& 6solid-state" **database** applications based on a web-enabled relational
database management system (RDBMS), each running on a separate server
platform. The **database** application is unitary in that the **database** is
organized around a central table, an item table containing item records
which serve as...

...some and preferably all relevant business domains, e.g., products,
payments, performance, personnel, etc. The **database** application
software reads item records, organizes selected relevant information from
the item records, and presents...

...domain-specific, work-relevant displays. Since the item record is the
building block of the **database** application, system functionality can be
readily expanded as necessary by adding fields to the item record. For
example, an "XYZ" domain may be added to the **database** by adding fields
X, Y and Z to the item record. The basic structure of the **database** does
not change, only the way data is arranged and viewed..The design is
therefore...

...with different screen displays of relevant information to do their that
information within the entire **database** . As a result, data is "touched"
only once, maximizing data integrity, and data is always "in sync,"
defining characteristics of a solid-state **database** . Because of the
solid-state nature of the **database** , the present system avoids problems
of data integrity and synchronization common in large, modular enterprise
...

...in which there occurs substantial duplication of data, necessitating
data propagation. Each copy of the **database** application is
"self-sufficient" in that there are stored within the **database** , in
accordance with a single **database** schema, all current records required
to perform a full spectrum of existing known business functions...

...by limiting the number of business partners for which current records
are stored within the **database** . Scalability is achieved by adding
additional copies of the **database** application or commerce engine
(scalability through "cloning"), each running on its own server platform.
One or more additional **servers** may be used to direct requests to the
appropriate **server** and to consolidate corresponding relevant
information from the various **servers** , enabling multiple smaller
solid-state **databases** to create the appearance and functionality of a

single larger solid-state **database** . An example of a suitable web-enabled RDBMS is the Fourth Dimension **database** by ACI US Corporation using the 4-D Open API plug-in. Referring now to...

- ...embodiment of the invention. Maximum advantage is taken of the integration of the solid-state **database** and the integration made possible by the web in order to tie together a far...
- ...technology block of the RDBMS makes possible access to all of the data within the **database** via the web. Business users may include corporations, SMBs (small and medium-size businesses), buying...flow via the web. When a user requests service, the user first identifies within the **database** a product record corresponding to the product for which service is being requested. Throughout the...
- ...are received via the web and matched to the corresponding product record stored in the **database** . For some (or all) of the service requests (especially service requests requiring field service...
- ...in Figure 165. Referring now to Figure 165, the appearance of a single larger solidstate **database** is created using multiple smaller solid-state **databases** , i.e., multiple copies of the **database** application, each running on its own server platform. One additional server acting as a "traffic...
- ...from the various servers, creating the appearance and functionality of a single larger solid-state **database** . Increases in demand may be met by simply adding additional copies of the **database** application, each running on its own server platform. Because each copy of the **database** application is self-sufficient and implements a full complement of end-to-end business functions, there is no need for the different copies of the **database** application to intercommunicate (i.e., be mirrored), since each serve a separate and distinct demand...shows in some detail the structure and function of a single "on demand" solid-state **database** application unit. In Figure 165, the single-letter abbreviations C, V, I, SP and GOV...
- ...in various places within Figure 165. Depending on the nature of the underlying business, the **database** may store an electronic catalog, created and maintained, preferably, by accessing vendor information via the...
- ...the business may include demands by governmental or other bodies, for example a demand for **tax** payment. The generality of the constructs and mechanisms of the **database** application allows for virtually any type of demand to be handled in like manner using...
- ...new demand. As previously described, the

114

item record is the building block of the **database** application. In general, system functionality is expanded as necessary by adding fields to the item...

- ...business domains: products, payments, performance and personnel. That is, the cross-domain nature of the **database** application is reflected in the fundamental record, the item record. If an item is new...
- ...infinitude of type of demand. Such manipulation also allows for compression of the solid-state **database** , since the underlying mechanism and record structure is "one size fits all" and never changes...
- ...preparation may, of course, be affected by changes in supply

information. Hence, if the
115

database include an electronic catalog, as the electronic catalog is updated, if supply information has changed...

...if the item is old), then a post-sale service record is created. Within the **database**, the post-sale service record is related to the MWSs to which the item belongs...MWS can be related to other items within the same or different MWS. These relationships **form** the basis of Supply Chain Management (SCM). Suppliers within a supply chain occupy different tiers...

...management, employee evaluation, customer/vendor evaluation, etc. Because of the solid-state nature of the **database**, all of the functions within all of the domains can be performed in real time...

...more, because the RDBMS is web-enabled, as much of the information stored within the **database** as business management desires can be shared with partners, again in real time, via the...from the description thus far, the collection of all relevant transactional information within a single **database** has profound implications. Just as important as "raw" information, however, is meaningful information access. The present system provides meaningful information access in the **form** of a user interface that exemplifies "Open Navigation." Open Navigation allows any piece of information...

...etc. Governmental and other bodies can be given access to relevant information. For example, the **IRS** or other **tax** authority could be given access to all records required to conduct a full audit, via...Sales assignment or activity focus, initiates an automated, end-to-end business process by entering **information** into a client/ **server** single relational **database**, which **forms** a common hub of the automated business process. In particular, Item Sold and Item Detail...to Figure 170, a block diagram is shown of an Internet-intrinsic, distributed business transaction **data** cluster. As explained previously, separate instances of the unitary **database** application software, running on separate PC **servers**, are provided for different business segments (e.g., different customers, accounts, groups of customers). These...

... form 104 to the c9minerce gateway 52. The commerce
gateway 52 then submits the application **data** 106 from the completed
form to the credit processing **server** 53 for account and credit limit
authorization. The credit processing **server** 53 verifies the application
data by requesting identity information 116 from an identity bureau 56...

...provided and administrated by a credit agency for processing credit
reports. Hence, the credit processing **server** 53 requests the desired
identity and credit **information** electronically, e.g., via appropriate
database queries, etc., from the identity bureau 56 and credit bureau
58. Returning to the illustrated...

...64, In one actual embodiment of the present invention, the buyer fills
out the application **form** with the appropriate application **data on -**
line . Alternatively, the buyer can request the application on a printed
form and submit the printed...

...via facsimile or regular mail, in which case a customer service
representative will enter the **information** into the account **database**
97 of the credit processing **server** 53 via the administrative user
computer 54. The application data includes information such as social...
credit limit set as described above, the account can be customized by the
buyer, Account **information** is then stored in the account **database** 97
of the credit processing server 53. FIGURES 9A-9C illustrate an
exemplary set of Web pages downloaded from the I...

... described in detail below. Customer service
representatives and managers have access to all of the
information in the **database** via the Administration System
60 through a dedicated secure Web **server** 120 available
only to authorized personnel. The Administration System
60 is used to produce reports...

...and is
primarily responsible for providing the overall online
shopping experience to the customer. The **Online** Shopping
System 20 of the present invention provides an electronic
catalog of available products stored in the Products
Database 720 along with the price of the product. This
information is generated by the Catalog Builder/Price
Modeler 50 to be described in detail below...

...dynamic variable, a new catalog does not have to be

generated every time the Product Database 70 is updated.
only the updated product information will be changed in
the catalog.

In conjunction with the electronic catalog, the
Online Shopping System 20 provides an electronic shopping
cart that keeps record of each item marked...warehouse information,
shipment date,
invoice amount, shipping cost, tracking number, etc. and
stores the order information in the Order Database 740 to
make it immediately available to the customer service and
the customer's online account.
Credit Card Services
Credit Card Services sub-system 320 receives the
orders forwarded to...

Detailed Description

Detailed Description

... present invention is shown. In a preferred embodiment, this table is linked in the Access **database** with other information to assist the residency analyzer in determining whether or not a treaty...

...with a country named by the foreign national as one where he or she was **tax** resident recently. Also in a preferred embodiment, this table uses as the country code, the two-letter code designated by the **IRS** for that country. The full name of the country is included, as is a short- **form** name, if one exists. Information contained in the country table is also used to supply data to displays and **forms** for country name and code.

Now turning to Figures 7a through 7k, portions of a...
